Python Tasks - Loops

1. **Write a program to find the sum of the digits of a number repeatedly until the sum is reduced to a single digit.**
2. **Program to find LCM and HCF of two numbers**
3. **Write a program to accept any number n and print the cube of all numbers from 1 to n which are divisible by 3. Rewrite the program using a continue statement.**
4. **Write a program to enter the price of 5 items using a for loop. Calculate and display the total amount and average price of the items. If the total amount is more than ₹1000, give a 10% discount and display the discount amount and final amount after discount. Otherwise, display the final amount without any discount.**
5. **Write a program to input a number and count the digits in it. Use while loop and the program should work correctly for 0 also**
6. **Write a program to enter a number and find the reverse of that number. Also display the double of the reverse number. (don't use string magic)**
